

Set your 3G data on and download patch from <https://www.bt.bt> (EAP-SIM mobileconfig).

Step 1:

Open the file you have download and click on the Install option on the right corner where you will be prompted to enter your iphone passcode.

Step 2:

Again select the install option at the top right corner.

Step 3:

Select the install option.

Step 4:

Press done.

EAP-SIM Profile

Bhutan Telecom Ltd

Signed by **Not Signed**

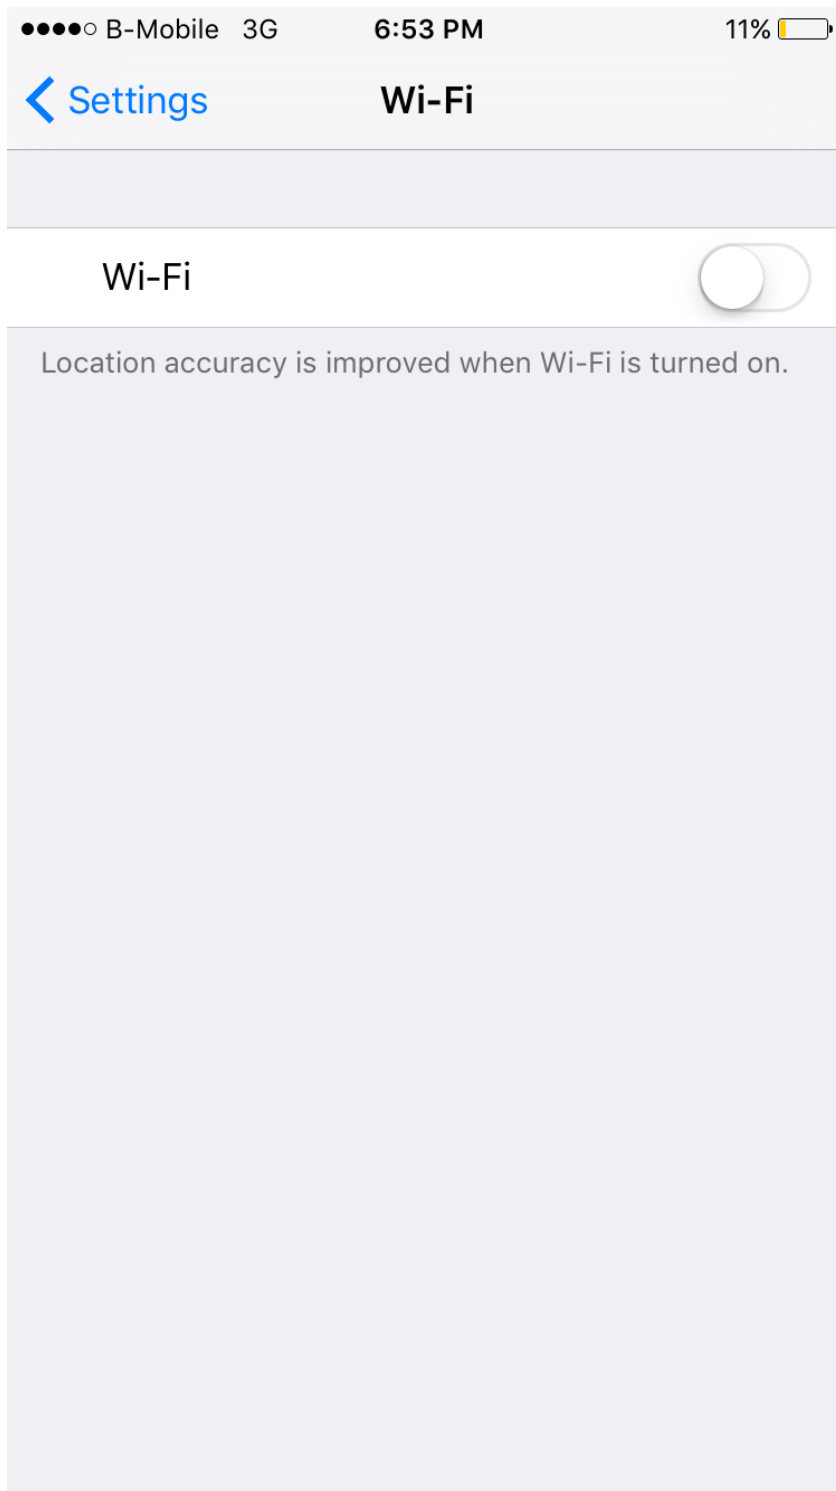

Description This is a profile used to configure an iPhone or iPad with a WiFi EAP-SIM profile to test WiFi offload using Alepo's offload solution. Although same method of provisioning can be used in production, such profile may also be pre-configured on the device, or provisioned over-the-air by the carrier as part of "Carrier Settings", if carrier has partner relationship with Apple.

Contains Wi-Fi Network

More Details >

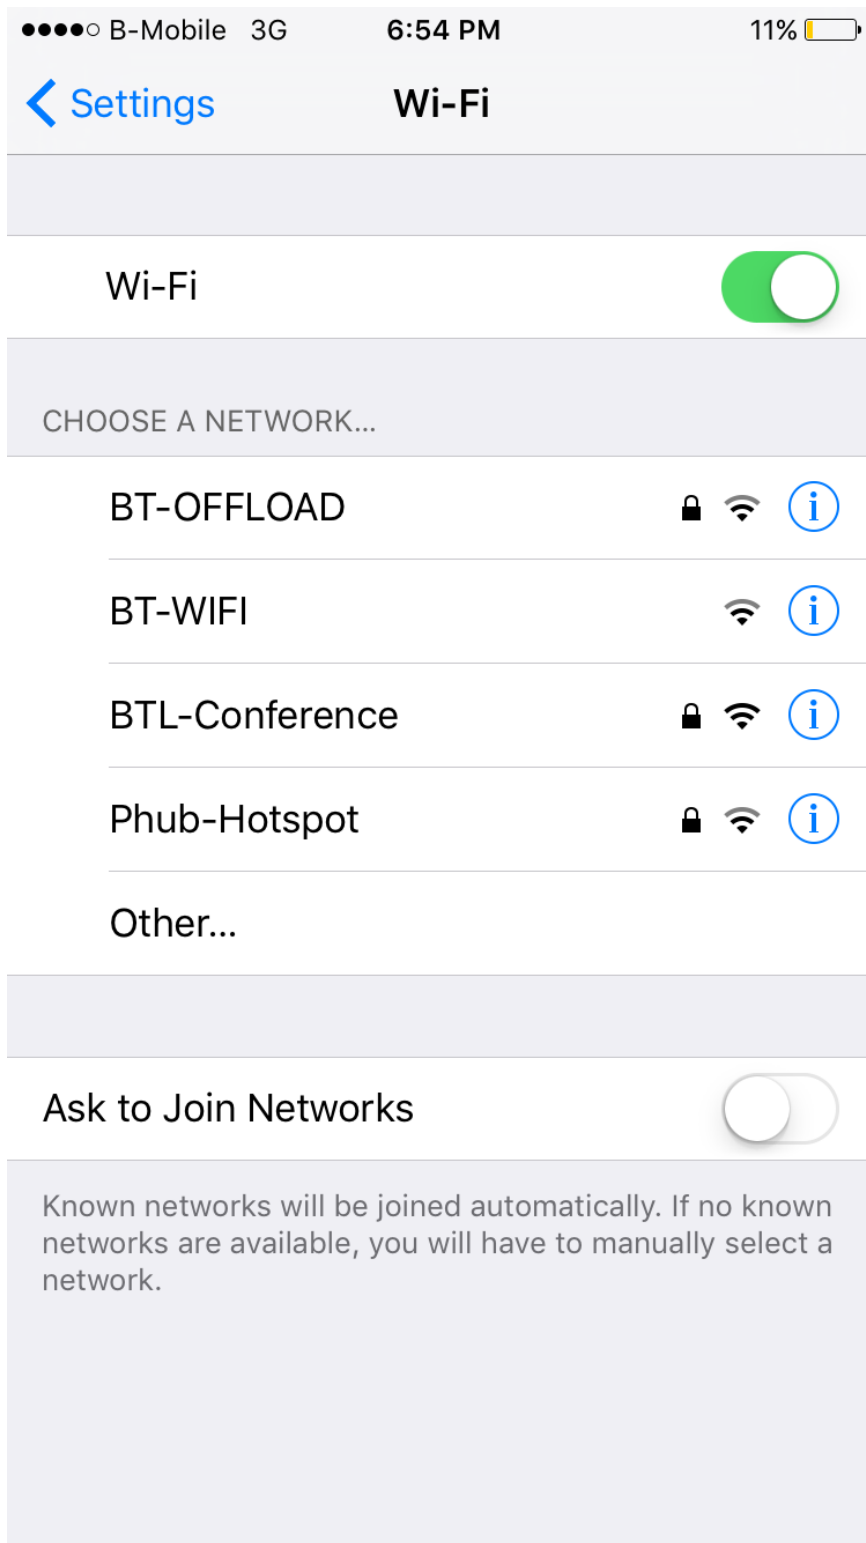

Step 5:

Go to setting, select WIFI

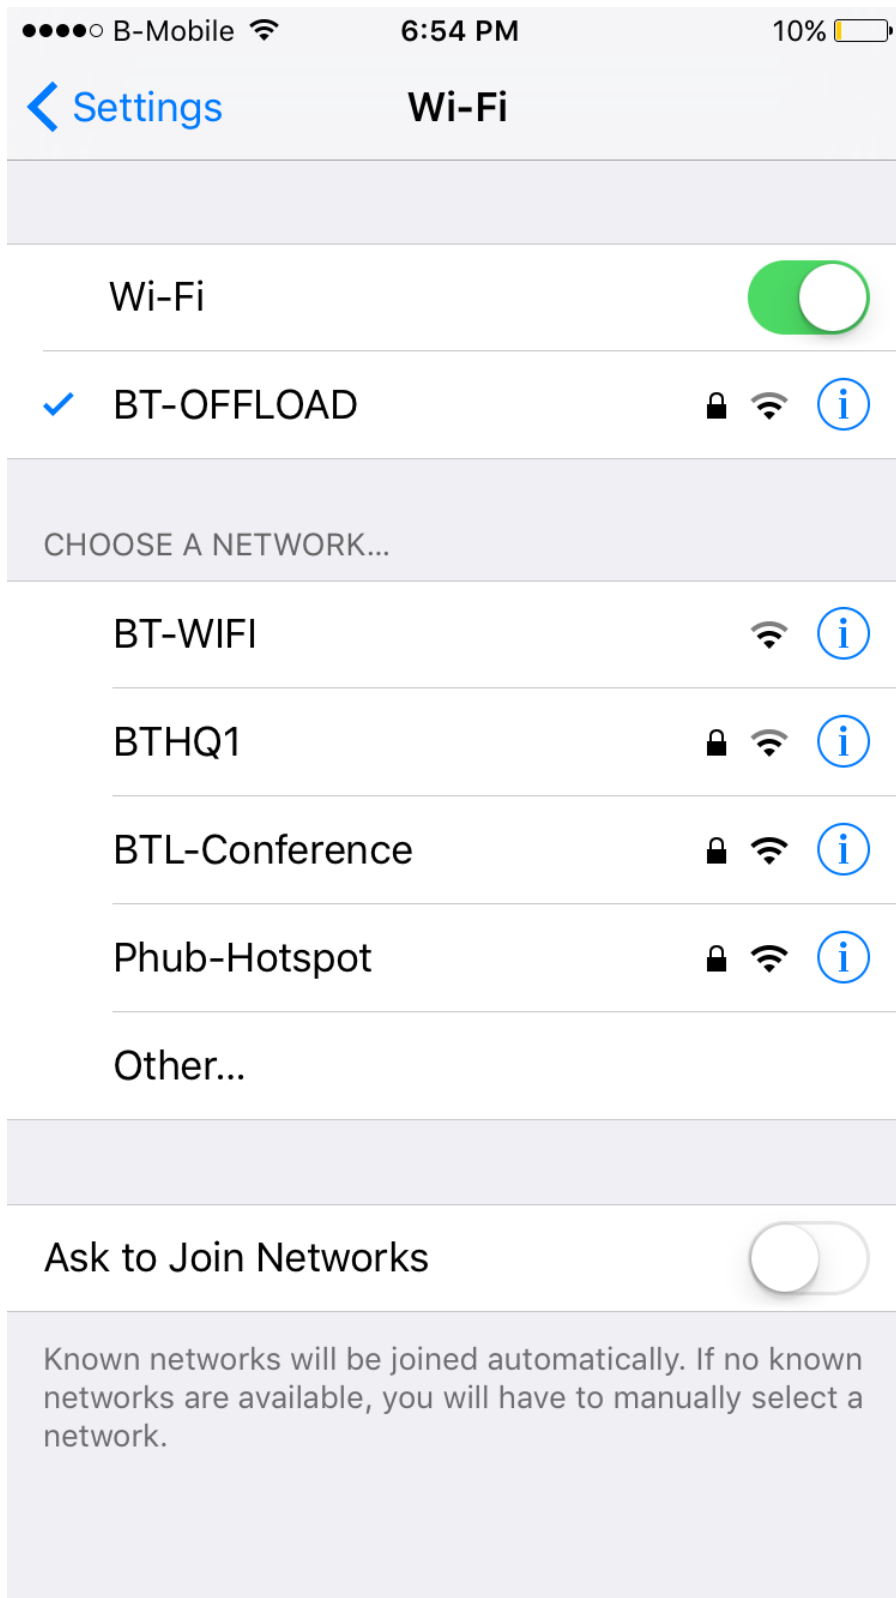

Step 6:

Set your WIFI on and you will see all available WIFI nearby.

Step 7:

Select BT-OFFLOAD to get connect to our WIFI.

If you see WIFI symbol on top of your iphone screen, you are now connected to our WIFI. This is one time setting and you will be connected to our WIFI whenever you walk into our WIFI zone if your WIFI is on.
